

Create, Deploy, Analyze: Web Applications to Engage.

The Software Industry is going through interesting times. Our customer demands have grown and solid business models from low-cost open source solutions have created an excellent variety of solutions for our customers. The new business model has moved away from traditional licensing to Software-as-a-Service (SaaS.) Traditional product shelf life has been shrinking from the rise of web applications. With new technology, specifically asynchronous communication between web browser and server (Web 2.0), technology is changing at a faster pace than ever.

These forces are ultimately providing better choices for our clients, through successful innovation, integration and effective marketing of our client's core business with carefully selected web applications. At Duncan Ingram, Inc. we have over a decade of market expertise in software development and related services. We empower our customers with software products, services and an overall architectural strategy to cut their expenses and see their software as an investment through our for SaaS, open source, modern web 2.0 and related packages.

[Granola CMS](#)

Granola is a content management system providing enterprise-level features, such as delegation of content control, integration with portal systems, integration with dynamic languages like PHP, and secure remote publishing. [

[learn more](#)]

Prism

Prism provides a secure layer between Granola CMS and the web server, providing features such as clickstream reporting, post-processing to transform content, such as providing a separate view to meet ADA compliancy.

[AuFusion](#)

Automatically update your dynamically driven web application, including regular file data and SQL commands. Drop AuFusion on your web server and get application updates from aufusion.com when they're available for production. Let AuFusion handle distributing application updates to your clients, or use aufusion.com to keep your Duncan Ingram products up to date. [[learn more](#)]

[Wayfinder LMS](#)

Wayfinder is a Learning Management System that provides an interface to create, manage and deploy tests which facilitate interactive learning. The software has already been integrated into a risk analysis package which assesses heritable and lifestyle related diseases based on patient feedback. Scoring allows creation of triggers which provide dynamic feedback after each test. [[learn more](#)]

[TourGuider](#)

TourGuider is a simple, web based tour management system that accommodates multiple tour operators in various locations, complete with search and tagging functionality. TourGuider's administrative interface provides easy management of tour operators, tours, tags, photos, bookings, processing and payment tracking.
