---

Automatically update your dynamically driven web applications, including regular file data and SQL commands. Simply drop AuFusion on your web server and get application updates as soon as they become available. Let AuFusion handle the distribution of application updates. [learn more...](#)

The Software Industry is going through interesting times. Our customer demands have grown and solid business models from low-cost open source solutions have created an excellent variety of solutions for our customers. The new business model has moved away from traditional licensing to Software-as-a-Service (SaaS.) Traditional product shelf-life has been s

shrinking due to the rise of web applications. With new technology, specifically asynchronous communication between web browser and server (Web 2.0), technology is changing at a faster pace than ever.

These forces are ultimately providing better choices for our clients, through successful innovation, integration and effective marketing of our client's core business with carefully selected web applications. At Duncan Ingram, Inc., we have over a decade of market expertise in software development and related services. Our goal is to empower our customers with software products, services and an overall architectural strategy to cut their expenses and see their software as an investment through our for SaaS, open source, modern web 2.0 and related packages.
